(778) 239-4062 | eric_m250@outlook.com | <https://github.com/ericmorrisondev> | <https://ericmorrisondev.com/>

Self Taught Full Stack Developer building responsive web applications with emphasis on code maintainability, AI integration, and data-rich interfaces. Built and deployed 6 websites for local and international clients in the past year.

Selected Projects

Policy Boi - RAG Powered Insurance Policy Analysis Platform

React, Node.js, Express, PostgreSQL, ChromaDB, OpenAI API, LangChain, Tailwind CSS, React PDF
Enabled high-relevance, confidence-scored LLM responses using custom prompt structure integrated with grounded source of vector embeddings. Enabled accurate and performant data retrieval by implementing a document processing pipeline including parsing, text chunking, embedding generation, and vector db storage.
Reduced API costs and improved performance by implementing in-memory caching for user queries.
Implemented multiple RAG-powered features including policy Q&A, multi policy comparison, and claim checklist generation.

Nevernote - Personal Notes & RAG Q&A App

Next.js, React, Typescript, Tailwind CSS, PostgreSQL, Prisma, Zod, LangChain, ChromaDB
Enabled natural-language Q&A over personal notes by building an end-to-end RAG pipeline with LangChain chunking, OpenAI embeddings, and vector search in Chroma, including ingest on note create/update and index cleanup on delete. Delivered grounded answers with source citations via a global chat panel and user-scoped retrieval filters so each session only searches that user's indexed chunks. Built core note-taking workflows with rich-text editing, notebook and stack organization, drag-and-drop ordering, and Postgres-backed CRUD secured with session authentication. Improved reliability and maintainability with modular server-side RAG utilities, Zod-validated APIs, and unit tests for chunking logic.

Full Snack - AI-Powered Meal Generator App

React, Node.js, Express, PostgreSQL, OpenAI API, Tailwind, Render
Enabled dynamic meal suggestion generation with custom prompt structure configured to provide structured JSON data cleaned and parsed by backend. Developed a responsive shopping list that syncs with meal suggestions through React state management and real-time database updates. Greatly improved code maintainability by centralizing rendering logic with modular, reusable components. Enhanced UX by implementing multiple input interfaces for meal generation and adding Framer Motion animations throughout UI.

Tools and Applications

Javascript, Typescript, HTML, CSS, LangChain, RAG pipelines, React, Next.js, Prisma, Zod, Node.js, Express, Tailwind CSS, PostgreSQL, REST APIs.

Education

2013 - 2018

Bachelor of Arts in Literature and History — Concordia University, Montreal

Post Graduate Certificate in Education — University of Nottingham (Online)

Professional Experience
English, Literature, & History Teacher — Shanghai, China

2013 – 2023

Developed engaging lessons focused on analytical thinking and clear communication.

Adapted complex ideas for diverse learners — a skill that now informs my development and collaboration style.
